

# Cascable 2.0

Get started for free in the iOS App Store today

A professional remote control for your WiFi-enabled camera, available now for iOS

STOCKHOLM — August 11th, 2016 — Available today, the updated Cascable app is the best tool for working with your Canon, Nikon, Olympus or Sony camera in the field. Whether it's taking perfect group shots with your family using the included Apple Watch app or nailing that hard-to-reach shot in your latest photoshoot, Cascable will prove to be an essential part of the photography toolkit for the professional and amateur photographer alike.

Cascable provides a powerful and fast user interface whether you're on iPad, iPhone, or iPod touch. Primary exposure adjustments and focus/shutter release are front and centre, and advanced autofocus, timer and drive controls are just a tap away. Unlike other apps, Cascable supports downloading and exporting full resolution photos — including RAW files — from your camera, and with second screen support via AirPlay or HDMI you can view your photos on the big screen. Other innovations include an Apple Watch app that puts your camera's shutter right on your wrist, a set of calculators to help with the tricky exposure calculations needed for astrophotography and neutral density filters, and Shutter Robot — your friendly shutter automation tool, here to help with timelapses, exposure bracketing and more!

The updated version 2.0 includes support for over 40 new camera models from Nikon, Sony and Olympus on top of the Canon models already available, and an app-wide dark theme for working in low-light conditions, alongside numerous optimisations and workflow improvements throughout the whole app.

Cascable is available to get started with for free from the iOS App Store, with Pro feature packs being available at \$9.99 each (priced equivalently in other regions) or bundled together at the discounted price of \$24.99. Please visit <http://cascable.se/> for more information on Cascable, including screenshots, photographs and detailed user guides.

Cascable is developed by Cascable AB, a small mobile development company founded in Stockholm, Sweden in 2015.
